# DATA SHEET

OLED-MODULE

**DEP 256064G-W**  
**3,55“ - OLED**

Product Specification

Ver.: 1

07.11.2025

## Revision History

VERSION	DATE	REVISED PAGE NO.	Note
0	21.10.2025		First release
1	07.11.2025		1.Modify Application recommendations 2.Modify I2C-bus data format

# **Contents**

- 1.General Specification
- 2.Interface Pin Function
- 3.Contour Drawing & Block Diagram
- 4.Absolute Maximum Ratings
- 5.Electrical Characteristics
- 6.Optical Characteristics
- 7.OLED Lifetime
- 8.Reliability
- 9.Inspection specification
- 10.Precautions in use of OLED Modules

# **1.General Specification**

The Features is described as follow:

- n Module dimension: 99.20 x 33.50 x 2.01 mm
- n Active area: 87.52 x 21.28 mm
- n Dot Matrix: 256 x 64 Dots
- n Pixel Size: 0.312 x 0.303 mm
- n Pixel Pitch: 0.342 x 0.333 mm
- n Display Mode: Passive Matrix
- n Duty: 1/64 Duty
- n Gray Scale: 4 bits
- n Display Color: White
- n IC: SSD1363
- n Interface: 6800,8080,4-Wire SPI,I2C
- n Size: 3.55 inch

## 2.Interface Pin Function

Pin Number	Symbol	Function
1	ESD_GND	ESD Ground pin
2	VSS	Ground pin. It must be connected to external ground.
3	VCC	Power supply for panel driving voltage. This is also the most positive power voltage supply pin. A capacitor should be connected between this pin and VSS.
4	VCOMH	COM signal deselected voltage level. A capacitor should be connected between this pin and VSS.
5	VLSS	Analog system ground pin. It must be connected to external ground.
6	D7	<p>These pins are bi-directional data bus connecting to the MCU data bus. Unused pins are recommended to tie LOW.</p> <p>When serial interface mode is selected, D2, D1 should be tied together as the serial data input: SDIN, and D0 will be the serial clock input: SCLK.</p> <p>When I2C mode is selected, D2, D1 should be tied together and serve as SDAout, SDAin in application and D0 is the serial clock input, SCL.</p>
7	D6	
8	D5	
9	D4	
10	D3	
11	D2	
12	D1	
13	D0	
14	E(RD#)	<p>This pin is MCU interface input.</p> <p>When 6800 interface mode is selected, this pin will be used as the Enable (E) signal.</p> <p>Read/write operation is initiated when this pin is pulled HIGH and the chip is selected.</p> <p>When 8080 interface mode is selected, this pin receives the Read (RD#) signal. Read operation is initiated when this pin is pulled LOW and the chip is selected.</p> <p>When serial or I2C interface is selected, this pin must be connected to VSS.</p>
15	R/W# (WR#)	<p>This pin is read / write control input pin connecting to the MCU interface.</p> <p>When 6800 interface mode is selected, this pin will be used as Read/Write (R/W#) selection input. Read mode will be carried out when this pin is pulled HIGH and write mode when LOW.</p> <p>When 8080 interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin is pulled LOW and the chip is selected.</p> <p>When serial or I2C interface is selected, this pin must be connected to VSS.</p>

16	BS1	MCU bus interface selection pins. Select appropriate logic setting as described in the following table. BS2 and BS1 are pin select.				
			8080	I2C	6800	4-wire SPI
		BS1	1	1	0	0
17	BS2	BS2	1	0	1	0
		<b>Note:</b> (1) 0 is connected to VSS (2) 1 is connected to VDD				
18	D/C#	This pin is Data/Command control pin connecting to the MCU. When the pin is pulled HIGH, the data at D[7:0] will be interpreted as data. When the pin is pulled LOW, the data at D[7:0] will be transferred to a command register. In I2C mode, this pin acts as SA0 for slave address selection.				
19	CS#	This pin is the chip select input connecting to the MCU. The chip is enabled for MCU communication only when CS# is pulled LOW (active LOW).				
20	RES#	This pin is reset signal input. When the pin is pulled LOW, initialization of the chip is executed. Keep this pin pull HIGH during normal operation.				
21	FR	This pin outputs RAM write synchronization signal. Proper timing between MCU data writing and frame display timing can be achieved to prevent tearing effect. It should be kept NC if it is not used.				
22	IREF	This pin is the segment output current reference pin. IREF is supplied externally. A resistor should be connected between this pin and VSS to maintain the current around 10uA. It should be kept floating when internal IREF is chosen by command setting.				
23~24	NC	This is dummy pin. It should be kept NC.				
25	VP	This pin is the segment pre-charge voltage reference pin. A capacitor can be connected between this pin and VSS to improve visual performance. It can also be float per application. No external power supply is allowed to connect to this pin.				
26	VDD	Power supply pin for core logic operation. A capacitor should be connected between this pin and VSS.				
27	VSL	This is segment voltage (output low level) reference pin. This pin has to be connected with resistor and diode to ground (details depends on application).				
28	VLSS	Analog system ground pin. It must be connected to external ground.				
29	VCC	Power supply for panel driving voltage. This is also the most positive power voltage supply pin. A capacitor should be connected between this pin and VSS.				
30	ESD_GND	ESD Ground pin				

### 3.1 Application recommendations

Recommended components :

C2 : 1.0uF

C1,C4 : 4.7uF

C3 : 2.2uF

R2 = 50, 1/8W

D1 , D2: Vth=0.7V, 1N4148

Voltage at IREF  $\approx$  VCC – 3V. For VCC = 16V, IREF = 10uA:

$R1 = (\text{Voltage at IREF} - VSS) / IREF$

$= (16 - 2)V / 10\mu A$

$\geq 1.4 \text{ M}\Omega^{(2)}$

Note:

- (1).The capacitor value is recommended value. Select appropriate value against module application.
- (2). Minimum value. When OLED product application, then R1 must be greater than the calculated value.
- (3). I2C Mode : Both the data line (SDA) and the clock line (SCL) should be pulled up by external resistors.

## 4. Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Unit	Notes
Supply Voltage	VDD	-0.3	4.0	V	1, 2
Supply Voltage	VCC	-0.5	19.0	V	1, 2
Operating Temperature	TOP	-40	+80	°C	-
Storage Temperature	TSTG	-40	+85	°C	-

Note :

1. All the above voltages are on the basis of “VSS = 0V”.
2. When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 “Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.
3. The absolute limit temperature was verified according to the test conditions of reliability test (See section 9. Reliability) , and module was met all criteria.
4. The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80 °C.

## 5. Electrical Characteristics

### 5.1 DC Electrical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
Low voltage power supply, power Supply for I/O pins	VDD	-	1.65	3.0	3.3	V
Operating Voltage	VCC	-	8.0	16.0	16.5	V
High Level Input	VIH	-	0.8×VDD	-	VDD	V
Low Level Input	VIL	-	0	-	0.2×VDD	V
High Level Output	VOH	-	0.9×VDD	-	VDD	V
Low Level Output	VOL	-	0	-	0.1×VDD	V
Display 50% Pixel on	ICC	VCC =16V	-	30	45	mA

Note: The VCC (VPP) value can be adjusted according to the demand brightness. When VCC (VPP) is lowered, the brightness decreases or when VCC (VPP) is increased, the brightness increases. The VCC (VPP) value is set within the recommended range. The life time of OLED is directly related to the set brightness, and lower brightness helps to improve the life time.

## 5.2 Initial code

```
void Initial_ic(void)
{
    write_command(0xfd);           //set Command Lock
    write_data(0x12);

    write_command(0x15);           //set Column Address
    write_data(0x08);
    write_data(0x47);

    write_command(0x75);           //set Row Address
    write_data(0x00);
    write_data(0x3F);

    write_command(0x5c);           //Write RAM Command

    write_command(0xa0);           //set Re-map and Dual COM Line mode
    write_data(0x12);
    write_data(0x10);

    write_command(0xa1);           //set Display Start Line
    write_data(0x00);

    write_command(0xa2);           //set Display Offset
    write_data(0x10);

    write_command(0xa6);           //set Display Mode

    write_command(0xb1);           //set Phase Length
    write_data(0x74);

    write_command(0xba);           //Set pre-charge voltage configuration
    write_data(0x03);

    write_command(0xb6);           //set Current Pre-charge Period
    write_data(0xC8);

    write_command(0xb3);           //set Front Clock Divider/Oscillator Frequency
    write_data(0x30);

    write_command(0xbb);           //set pre-charge voltage
    write_data(0x07);

    write_command(0xbe);           //set VCOMH
```

```
    write_data(0x04);

    write_command (0xAD);
    write_data (0x80);           //external IREF

    write_command(0xc1);         //set Contrast current
    write_data(0x90);

    write_command(0xCA);         //set MUX Ratio
    write_data(0x7F);

    write_command(0xaf);         //Display ON
}
```

Note1: Initial code is for reference only. Please make the best adjustment with the OLED module.

Note2: Command: Set Contrast Control (0xC1) , This command sets the Contrast Setting of the display. The chip has 256 contrast steps from 00h to FFh. The segment output current increases as the contrast step value increases. The segment current increases, the OLED brightness increases.

## I2C-bus data format

Note:

- Co – Continuation bit
- D/C# – Data / Command Selection bit
- ACK – Acknowledgement
- SA0 – Slave address bit
- R/W# – Read / Write Selection bit
- S – Start Condition / P – Stop Condition

Slave Address

Control byte

### (a) I2C address bit (SA0)

The slave address is following the start condition for recognition use. The slave address is either "b0111100" or "b0111101" by changing the SA0 to LOW or HIGH (D/C pin acts as SA0).

(b) "R/W#" bit is used to determine the operation mode of the I2C-bus interface. R/W#=1, it is in read mode. R/W#=0, it is in write mode.

(c) After the transmission of the slave address, either the control byte or the data byte may be sent across the SDA. A control byte mainly consists of Co and D/C# bits following by six "0"s.

- a. If the Co bit is set as logic "0", the transmission of the following information will contain data bytes only.
- b. The D/C# bit determines the next data byte is acted as a command or a data. If the D/C# bit is set to logic "0", it defines the following data byte as a command. If the D/C# bit is set to logic "1", it defines the following data byte as a data which will be stored at the GDDRAM. The GDDRAM column address pointer will be increased by one automatically after each data write.

## 6.Optical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
View Angle	(V) $\theta$	-	160	-	-	deg
	(H) $\phi$	-	160	-	-	deg
Contrast Ratio	CR	Dark	10,000:1	-	-	-
Response Time	T rise	-	-	10	-	$\mu$ s
	T fall	-	-	10	-	$\mu$ s
Display with 50% checkerboard Brightness <sup>(1)</sup>			60	80	-	cd/m <sup>2</sup>
CIEx(White)		(CIE1931)	0.24	0.28	0.32	-
CIEx(White)		(CIE1931)	0.28	0.32	0.36	-

Note

1. The brightness value is based on the setting of VCC(VPP) equal to the Typical value.
2. 50% checkerboard means half of the display area turn on & half area turn off, shown as a checkerboard.

## **7.OLED Lifetime**

<b>ITEM</b>	<b>Conditions</b>	<b>Min</b>	<b>Typ</b>	<b>Remark</b>
Operating Life Time	Ta=25°C / Initial 50% checkerboard brightness Typical Value	20,000 Hrs	-	Note

Note:

1. Lifetime is defined the amount of time when the luminance has decayed to <50% of the minimal brightness.
2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
3. Screen saving mode will extend OLED lifetime.
4. Lifetime is not guaranteed one but expected lifetime in normal condition.

## 8. Reliability

### Content of Reliability Test

Environmental Test			
Test Item	Content of Test	Test Condition	Applicable Standard
High Temperature storage	Endurance test applying the high storage temperature for a long time.	85°C 240hrs	—
Low Temperature storage	Endurance test applying the low storage temperature for a long time.	-40°C 240hrs	—
High Temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	80°C 240hrs	—
Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-40°C 240hrs	—
High Temperature/Humidity Storage	Endurance test applying the high temperature and high humidity storage for a long time.	60°C, 90%RH 240hrs	—
High Temperature/Humidity Operation	Endurance test applying the high temperature and high humidity Operation for a long time.	60°C, 90%RH 120hrs	—
Temperature Cycle	Endurance test applying the low and high temperature cycle. <div style="text-align: center;"> <p>-40°C    25°C    80°C 30min    5min    30min 1 cycle</p> </div>	-40°C / 80°C 30 cycles	—
Mechanical Test			
Vibration test	Endurance test applying the vibration during transportation and using.	Frequency: 10~55Hz amplitude: 1.5mm Time: 0.5hrs/axis Test axis: X, Y, Z	—
Others			
Static electricity test	Endurance test applying the electric stress to the finished product housing.	Air Discharge model ±4kv, 10 times	—

\*\*\* Supply voltage for OLED system = Operating voltage at 25°C

**Test and measurement conditions**

1. All measurements shall not be started until the specimens attain to temperature stability.  
After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the functional test at  $23\pm5^{\circ}\text{C}$ ;  $55\pm15\%$  RH.
2. All-pixels on/off exchange is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/Humidity Storage, Temperature Cycle.
4. No Condensation.

**Evaluation criteria**

1. The function test is OK.
2. No observable defects.
3. Luminance:  $> 50\%$  of initial value.
4. Current consumption: within  $\pm 50\%$  of initial value.

**APPENDIX:****RESIDUE IMAGE**

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

## 9. Inspection specification

### Inspection Standard:

MIL-STD-105E table normal inspection single sample level II.

### Definition

1 Major defect : The defect that greatly affect the usability of product.

2 Minor defect : The other defects, such as cosmetic defects, etc.

Definition of inspection zone:

Zone A: Active Area

Zone B: Viewing Area except Zone A

Zone C: Outside Viewing Area

Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble of quality and assembly to customer's product.

### Inspection Methods

1 The general inspection : Under fluorescent light illumination: 750~1500 Lux, about 30cm viewing distance, within 45° viewing angle, under 25±5°C.

2 The luminance and color coordinate inspection : By SR-3 or BM-7 or the equal equipments, in the dark room, under 25±5°C.

NO	Item	Criterion	AQL
01	Electrical Testing	1.1 Missing vertical, horizontal segment, segment contrast defect. 1.2 Missing character , dot or icon. 1.3 Display malfunction. 1.4 No function or no display. 1.5 Current consumption exceeds product specifications. 1.6 OLED viewing angle defect. 1.7 Mixed product types. 1.8 Contrast defect.	0.65
02	Black or white spots on OLED (display only)	2.1 White and black spots on display $\leq 0.25\text{mm}$ , no more than three white or black spots present. 2.2 Densely spaced: No more than two spots or lines within 3mm.	2.5

$y \leq 1/3L$	$x \leq a$												
07	Cracked glass	The OLED with extensive crack is not acceptable.	2.5										
08	Backlight elements	<div>8.1 Illumination source flickers when lit.</div> <div>8.2 Spots or scratched that appear when lit must be judged. Using OLED spot, lines and contamination standards.</div> <div>8.3 Backlight doesn't light or color wrong.</div>	<div>0.65</div> <div>2.5</div> <div>0.65</div>										
09	Bezel	<div>9.1 Bezel may not have rust, be deformed or have fingerprints, stains or other contamination.</div> <div>9.2 Bezel must comply with job specifications.</div>	<div>2.5</div> <div>0.65</div>										

NO	Item	Criterion	AQL
10	PCB , COB	10.1 COB seal may not have pinholes larger than 0.2mm or contamination.	2.5
		10.2 COB seal surface may not have pinholes through to the IC.	2.5
		10.3 The height of the COB should not exceed the height indicated in the assembly diagram.	0.65
		10.4 There may not be more than 2mm of sealant outside the seal area on the PCB. And there should be no more than three places.	2.5
		10.5 No oxidation or contamination PCB terminals.	2.5
		10.6 Parts on PCB must be the same as on the production characteristic chart. There should be no wrong parts, missing parts or excess parts.	0.65
		10.7 The jumper on the PCB should conform to the product characteristic chart.	0.65
		10.8 If solder gets on bezel tab pads, OLED pad, zebra pad or screw hold pad, make sure it is smoothed down.	2.5
11	Soldering	11.1 No un-melted solder paste may be present on the PCB.	2.5
		11.2 No cold solder joints, missing solder connections, oxidation or icicle.	2.5
		11.3 No residue or solder balls on PCB.	2.5
		11.4 No short circuits in components on PCB.	0.65
12	General appearance	12.1 No oxidation, contamination, curves or, bends on interface Pin (OLB) of TCP.	2.5
		12.2 No cracks on interface pin (OLB) of TCP.	0.65
		12.3 No contamination, solder residue or solder balls on product.	2.5
		12.4 The IC on the TCP may not be damaged, circuits.	2.5
		12.5 The uppermost edge of the protective strip on the interface pin must be present or look as if it cause the interface pin to sever.	2.5
		12.6 The residual rosin or tin oil of soldering (component or chip component) is not burned into brown or black color.	2.5
		12.7 Sealant on top of the ITO circuit has not hardened.	2.5
		12.8 Pin type must match type in specification sheet.	0.65
		12.9 OLED pin loose or missing pins.	0.65
		12.10 Product packaging must the same as specified on packaging specification sheet.	0.65
		12.11 Product dimension and structure must conform to product specification sheet.	0.65

## 11. Precautions in use of OLED Modules

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, change the components or modify its shape of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Do not apply input signals while the logic power is off.
- (5) Don't operate it above the absolute maximum rating.
- (6) Don't drop, bend or twist OLED display module.
- (7) Soldering: only to the I/O terminals.
- (8) Hot-Bar FPC soldering condition: 280~350C, less than 5 seconds.
- (9) DISPLAY has the right to change the passive components (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.) and change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, DISPLAY have the right to modify the version.)
- (10) DISPLAY has the right to upgrade or modify the product function.
- (11) For COG & COF structure OLED products, customers should reserve VCC (VPP) adjustment function or software update function when designing OLED supporting circuit. (The progress of OLED light-emitting materials will increase the conversion efficiency and the brightness. The brightness can be adjusted if necessary)..

### 10.1. Handling Precautions

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged. So, be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage by using following adhesion tape.
  - \* Scotch Mending Tape No. 810 or an equivalentNever try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy. Also, pay attention that the following liquid and solvent may spoil the polarizer:
  - \* Water
  - \* Ketone
  - \* Aromatic Solvents
- (6) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (7) Do not touch the following sections whenever possible while handling the OLED display modules.
  - \* Pins and electrodes

\* Pattern layouts such as the TCP & FPC

- (8) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- (9) Do not apply stress to the LSI chips and the surrounding molded sections.
- (10) Pay sufficient attention to the working environments when handling OLED display modules to prevent occurrence of element breakage accidents by static electricity.
- \* Be sure to make human body grounding when handling OLED display modules.
  - \* Be sure to ground tools to use or assembly such as soldering irons.
  - \* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
  - \* Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.

## 10.2. Storage Precautions

- (1) When storing OLED display modules, put them in static electricity preventive bags to avoid be directly exposed to sun or lights of fluorescent lamps. And, also, place in the temperature  $25\pm 5^{\circ}\text{C}$  and Humidity below 65% RH.(We recommend you to store these modules in the packaged state when they were shipped from DISPLAY. At that time, be careful not to let water drops adhere to the packages or bags.)
- (2) When the OLED display module is being dewed or when it is placed under high temperature or high humidity environments, the electrodes may be corroded if electric current is applied. Please store it in clean environment.

## 10.3. Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, OLED display module may be damaged.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specification and to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD / VCC). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the nearby devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) If the power supplied to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module.

\* Connection (contact) to any other potential than the above may lead to rupture of the IC.

- (7) If this OLED driver is exposed to light, malfunctioning may occur and semiconductor elements may change their characteristics.
- (8) The internal status may be changed, if excessive external noise enters into the module. Therefore, it is necessary to take appropriate measures to suppress noise generation or to protect module from influences of noise on the system design.
- (9) We recommend you to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.
- (10) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use the same image for long time in real application. When an OLED display module is operated for a long of time with fixed pattern, an afterimage or slight contrast deviation may occur.
- (11) The limitation of FPC and Film bending.

- (12) The module should be fixed balanced into the housing, or the module may be twisted.

- (13) Please heat up a little the tape sticking on the components when removing it; otherwise the components might be damaged.

#### 10.4. Precautions when disposing of the OLED display modules

- (1) Request the qualified companies to handle industrial wastes when disposing of the OLED display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.
